

CAPABILITY STATEMENT

Openshore Pty Ltd provides underground service installations using a complete range of trenchless and conventional construction techniques. Installations include communications, electricity, water, sewer, gas and soil remediation from single pipes to multiple configurations in sizes from 50mm to 1000mm holes in all ground conditions including rock. We provide solutions for Government departments, local Councils, commercial organizations, the private sector and all major infrastructure companies throughout Australia.

Based on the Central Coast of New South Wales, Openshore boasts over 25 years' experience in directional drilling, excavation, pit and pipe and asbestos removal. Fully insured and with ISO 9001 Quality Assurance, WHS 4801 and ISO 14001 Environmental Management Systems, we offer a complete service which is fast, accurate, reliable and highly professional. Specializing in all facets of infrastructure construction we understand the requirements of the industry and have policies in place to meet the highest standards of industry compliance.
